Performance Assessment Scenario

New York City and surrounding areas will most definitely be subjected to increasing sea levels in the future as discussed in this article: (https://www.giss.nasa.gov/research/briefs/rosenzweig_03/). Street flooding and transportation disruption, beach erosion, saltwater infrastructure damage and freshwater drinking source contamination are all possibilities. After reading the article, and through your knowledge of sea level rise and climate change gained through this BLOSSOMS video lesson, support the claim made in the article with scientific evidence and reasoning.
